

KaizenCommerce

MONTREAL / SHOPIFY PLUS / OPERATIONS ARCHITECTURE

ENGAGEMENT PROPOSAL

Jazzercise Shopify Plus Migration Strategy

PREPARED FOR

Jazzercise

PREPARED BY

KaizenCommerce

DATE

May 26, 2026

AUTHORIZATION

SOW Version 1.0

Built by people who built Shopify.

Executive Decision Brief

This document establishes a Blueprint-first strategy and packages the core operational recommendations so that the buyer can understand the decision path quickly.

RECOMMENDED PATH

Start with the Kaizen Unified Commerce Blueprint, then retain KaizenCommerce as a senior advisory layer through the September launch window. This matches Jazzercise's internal technical capability while protecting high-risk choices.

COMMERCIAL LOGIC

The estimated advisory path through launch is **\$8,500**, comprising a \$1,000 Blueprint plus three months of advisory support at \$2,500/month. Full implementation execution remains available at \$45,000 gross (\$44,000 net after the \$1,000 Blueprint credit).

LAUNCH CONTROL

The current Magento operation stays active until Shopify Plus, Sage Intacct/Ven flows, segment rules, tax, fulfillment, data, and drop scenarios fully pass quality standards. Cutover is handled as an operational sign-off, not a basic publishing task.

DECISION AREA	WHAT IT MEANS FOR JAZZERCISE
Current State	Magento is active. Salesforce Commerce was explored and delayed. Sage Intacct is launching in parallel with Shopify Plus.
Operating Model	One Carlsbad warehouse, approximately \$4M annual revenue, 2,000 to 2,500 orders/month, 500 to 1,000 active SKUs, approximately 1,000 returns/year, electronic gift cards, and scheduled product drops.
Customer Model	US franchisees, Japan franchisees, internal employees, and DTC customers require distinct access, pricing, visibility, and timing rules.
Core Risk	The fundamental challenge is not basic Shopify setup. The core risk lives at the complex intersection of Shopify Plus, Sage Intacct, Ven Technology, Salesforce CRM tags, HubSpot audiences, Avalara, ShipStation, product drops, franchise pricing, gift cards, returns, and warehouse inventory timing.

DECISION AREA	WHAT IT MEANS FOR JAZZERCISE
Decision Needed	Confirm Option 1 as the preferred path, assign system access owners, and utilize the Blueprint to evaluate whether advisory remains safe or full implementation becomes necessary.

SECTION 02

Situation & Operational Friction

Jazzercise is not executing a basic storefront move. The entire commerce operation has deep customer segments, high-volume product drops, warehouse dependencies, and ERP timing criteria that must be managed as a unified operating system.

The migration carries a significantly larger surface area than a standard Magento replacement. US franchisees, Japan franchisees, employees, and DTC customers require tailored pricing structures, localized product visibility, entitlement rules, and staggered launch timing. Franchisees behave commercially like B2B buyers, but the storefront experience must apply discounts and strict access rules automatically at the moment of purchase.

Salesforce Commerce was previously explored and partially implemented, but the architecture became overly complex and delayed. Shopify Plus represents the cleaner, more efficient platform direction because it gives Jazzercise a stable operating path for scheduled product drops, accelerated checkout improvements, standard app ecosystem coverage, rich API access, and a significantly lower day-to-day platform burden. The September 2026 launch target remains achievable only if structural architecture decisions are locked quickly and cross-system testing starts early.

KNOWN INPUT	DISCOVERY DETAIL	WHY IT MATTERS
Revenue / Orders	Approx. \$4M annual revenue and 2,000 to 2,500 orders per month.	Sufficient volume to make launch or data sync errors visible to the public quickly.
Catalog Scale	Approx. 500 to 1,000 active SKUs.	A manageable baseline catalog, but active drops and complex segment rules raise the QA testing burden.
Returns Profile	Approx. 1,000 returns per year.	Return processing states must be fully automated and tested with ShipStation, Shopify, and core accounting flows.
ERP Transition	Sage Intacct is replacing Epicor Enterprise as the ERP and warehouse fulfillment source of truth.	Inventory authority rules and order posting logic must be completely settled prior to launch windows.
Internal Capability	Andre has already executed initial Shopify research and prototyping; Jazzercise retains senior developers internally.	This internal depth directly supports Blueprint + Advisory as the lowest-cost, highest-leverage first path.

Recommended Path & Strategy

The correct initial step is not a default agency takeover. It is a controlled Blueprint phase, followed by expert senior advisory support, unless the architectural findings prove that full external implementation ownership is required.

Jazzercise should initiate work with the Kaizen Unified Commerce Blueprint, retaining KaizenCommerce as a senior strategic partner through the concurrent Shopify Plus and Sage Intacct launch window. This model keeps project delivery ownership firmly within the internal Jazzercise team while providing senior Shopify Plus judgment on complex architecture, launch risk mitigation, app configurations, and multi-system integration testing.

DECISION METRIC	CHOOSE BLUEPRINT + ADVISORY WHEN	CHOOSE FULL IMPLEMENTATION WHEN
Delivery Owner	Jazzercise keeps its internal engineering team and core vendors as the primary system implementers.	Jazzercise wants KaizenCommerce to directly manage delivery, engineers, and execution mechanics.
Technical Capacity	Internal developers possess clear bandwidth to configure, build, and respond immediately to QA findings.	Internal engineering capacity is pulled into other enterprise priorities or lacks native Shopify Plus depth.
ERP / Connector Risk	Ven Technology and the Sage partner can completely cover all required flows with KaizenCommerce providing structural review.	Connector structural gaps require KaizenCommerce to step in and directly coordinate the implementation workstreams.
Launch Confidence	Blueprint findings show all identified risks can be successfully governed with weekly reviews and rigorous test matrices.	Blueprint findings indicate the timeline and system complexity require a single, fully accountable execution owner.
Commercial Fit	An estimated investment of \$8,500 through launch represents the ideal risk-mitigated commercial path.	A net investment of \$44,000 is justified because speed, external ownership, and absolute capacity outweigh advisory cost control.

DECISION TRIGGER AFTER BLUEPRINT

Immediately following the Blueprint delivery, Jazzercise will officially decide whether the advisory structure remains safe or whether KaizenCommerce should convert into the full implementation owner. This structural decision will be based on real architecture findings, not a generic e-commerce checklist.

Scope of Work: Option 1 (Blueprint + Advisory)

Option 1 represents the recommended path. Option 2 is included transparently so that Jazzercise has a pre-priced, seamless conversion route if build ownership needs to shift after reviewing Blueprint deliverables.

Under Option 1, Jazzercise retains internal delivery ownership. KaizenCommerce provides the end-to-end diagnostics, technical architecture review, actionable implementation runbook, end-to-end test logic, and an executive advisory layer through the entire launch window.

WORKSTREAM	WHAT KAIZENCOMMERCE PRODUCES	WHY IT MATTERS FOR JAZZERCISE
Shopify Plus Blueprint	Written architecture blueprint covering Magento extraction, Salesforce Commerce requirements, Shopify Plus configuration, Sage Intacct sync, Ven Technology, core app stack, data migration mapping, and launch readiness metrics.	Provides Jazzercise an actionable, decision-ready architectural blueprint before engineering effort compounds.
Drop Architecture Review	Product drop runbook specialized for staged releases, warehouse inventory readiness, granular access timing, live monitoring, and automated rollback checks.	Ensures drops respect franchisee, localized Japan, employee, and DTC controls seamlessly before go-live.
Segment & Entitlement Review	Customer segment matrix defining structural tags, automated access rules, explicit discount logic, targeted product visibility, and edge cases.	Prevents complex franchise, employee, and country access rules from devolving into highly manual fixes inside Shopify.
Sage Intacct Integration Review	Integration data map with clear source-of-truth definitions, sync frequency/direction, technical failure points, operational reconciliation steps, and core test cases.	Sage Intacct acts as the physical inventory authority; the Shopify architecture must mirror the ERP's underlying operating model.
Migration & Data Continuity	Validation checklist for product catalogs, historical customer profiles, order histories, gift card outstanding balances, returns, SEO redirects, and rules.	Protects legacy customer histories, structural SEO authority, launch data quality, and warehouse throughput.
Weekly Strategy Workshops	One 60-minute live weekly strategy and architecture implementation workshop throughout the active advisory engagement window.	Maintains executive momentum while providing the internal engineering team with a senior Shopify review layer.

WORKSTREAM	WHAT KAIZENCOMMERCE PRODUCES	WHY IT MATTERS FOR JAZZERCISE
Unlimited Async Advisory	Unlimited Teams or email text-based support for ongoing implementation questions, architecture reviews, QA triage, app selection, and launch bugs.	Grants the team immediate access to enterprise implementation judgment without entering a high-cost agency build contract.

SECTION 05

Scope of Work: Option 2 (Full Implementation)

This path outlines full-agency ownership. It makes analytical sense if Jazzercise prefers KaizenCommerce to step in to lead implementation, manage end-to-end delivery mechanics, coordinate the core Shopify Plus configuration, execute data migrations, and fully drive launch readiness across the entire connected e-commerce stack.

WORKSTREAM	WHAT KAIZENCOMMERCE DIRECTLY OWNS	TANGIBLE OUTPUT
Project Leadership	Delivery roadmap, task sequencing, weekly sprint management, risk tracking, and cross-vendor stakeholder coordination.	A controlled project master plan explicitly tied to the hard September launch target.
Shopify Plus Setup	Plus platform configuration, core storefront settings, advanced checkout extensions, customer account models, Launchpad configuration, and app coordination.	A production-ready, highly optimized Shopify Plus core environment.
Storefront Implementation	Migration or full structural build of the storefront experience, product templates, collection architectures, segment handling, and merchandising workflows.	A polished Shopify storefront fully prepped for user acceptance testing.
Customer Segmentation	Wholesale Gorilla setups, Locksmith gating rules, Salesforce tag data mapping, employee discount tiers, franchise logic, and Japan access criteria.	A fully tested, automated entitlement and dynamic discounting engine.
Product Drop Infrastructure	Launchpad automated event model, staggered access checklist, inventory positioning flow, rollback logic, and active performance monitoring.	A repeatable, bulletproof product release system for upcoming drops.
Data Migration	Extraction, formatting, transformation, validation, and QA import of products, customers, legacy content, gift cards, and order histories from Magento.	Validated, clean historical and operational data inside the production Shopify database.

WORKSTREAM	WHAT KAIZENCOMMERCE DIRECTLY OWNS	TANGIBLE OUTPUT
Integration QA	End-to-end testing coordination across Sage Intacct, Ven Technology, Avalara, ShipStation, Salesforce CRM, HubSpot, and Shopify.	Comprehensive integration test matrix, documented failure states, and signed-off cutover criteria.
Fulfillment & Returns	ShipStation routing, localized Will Call workflow design, return handling automation logic, and physical warehouse operational QA.	Fulfillment workflows optimized for day-to-day warehouse personnel.
Launch & Cutover	Final rigorous QA rounds, live launch rehearsals, acceptance testing orchestration, stakeholder alignment, and controlled go-live support.	A successful site transition with intensive live monitoring active.

SECTION 06

Project Squad & Operating Cadence

This operational mapping provides absolute clarity regarding project staffing and accountability without implying fixed full-time human resource allocation where KaizenCommerce acts strictly as an advisory layer.

ROLE	OWNED BY	PRIMARY RESPONSIBILITY	DECISION RIGHTS
Partner Lead	KaizenCommerce	Commercial governance, core stakeholder communications, strict scope management, and weekly decision framing.	Escalates program risks and authorizes formal scope revisions.
Shopify Architecture Lead	KaizenCommerce CTO	Shopify Plus architecture blueprinting, platform constraints management, core data flow decisions, and launch-readiness evaluation.	Final approval authority for Shopify-side architectural frameworks.
Migration / QA Lead	KaizenCommerce	Data continuity validation, migration test plans, issue triage tracking, and formal acceptance criteria definition.	Confirms whether specific migration errors constitute strict launch thresholds.

ROLE	OWNED BY	PRIMARY RESPONSIBILITY	DECISION RIGHTS
Internal Technical Owner	Jazzercise	Directs internal engineering capacity, manages localized vendors, and owns implementation execution under Option 1.	Approves internal development decisions, code additions, and timelines.
ERP / Warehouse Owner	Jazzercise + Sage/Ven	Manages Sage Intacct configuration, Ven Technology connectors, physical inventory authority, order posting, and refund logic.	Approves ERP-side source-of-truth architectures and sync mechanics.
Marketing / CRM Owner	Jazzercise	Owns Salesforce CRM tags configuration, HubSpot marketing audience continuity, marketing tracking pixels, GA4 setups, and data needs.	Approves customer tag structure and marketing audience readiness data.

COMMUNICATION CADENCE	FORMAT	CORE BUSINESS PURPOSE
Blueprint Kickoff	60 Minutes, Live Working Session	Confirm live environments, data access permissions, stakeholder alignment, open technical questions, and launch constraints.
Weekly Advisory Workshop	60 Minutes / Weekly via Video	Review core architectural decisions, active QA findings, integration risk profiles, and timeline launch readiness.
Async Advisory Support	Teams or Direct Email	Rapid response to execution questions, review of active configuration choices, and identification of functional edge cases.
Launch Readiness Review	Single Focused Workshop	Executed 2 to 3 weeks prior to go-live to confirm end-to-end acceptance tests, resolve remaining blockers, and lock the go/no-go criteria.
Launch-Week Triage	Priority Advisory Support	Intensive live assistance during the launch window to instantly categorize issues as vendor defects, platform bugs, or deferred scope.

SECTION 07

Recommended App & Platform Stack

All software licensing fees, monthly app expenditures, and usage costs are billed directly by the respective SaaS vendors and are not included inside the KaizenCommerce service fees.

CORE FUNCTION	RECOMMENDED TOOL	ESTIMATED COST (USD)	MANAGED & OPERATED BY
Commerce Platform	Shopify Plus	Per Shopify Contract	Jazzercise owns. KaizenCommerce advises or implements based on path.
Product Drops Engine	Shopify Launchpad	Included with Plus	KaizenCommerce validates setup. Jazzercise operates post-launch.
Visibility Gating	Locksmith	Vendor Billed Directly	Jazzercise owns. KaizenCommerce validates technical configurations.
Franchise / Employee Pricing	Wholesale Gorilla	Vendor Billed Directly	Jazzercise owns. KaizenCommerce validates pricing rules.
Migration Support	Matrixify (Big Plan)	Estimated \$50 / Month	KaizenCommerce configures migration schemas. Jazzercise owns billing.
ERP Core	Sage Intacct	Vendor Billed Directly	Jazzercise and Sage partner own ERP. KaizenCommerce validates.
ERP Connector	Ven Technology	Vendor Billed Directly	Jazzercise and Ven own connector. KaizenCommerce reviews QA.
Tax Compliance	Avalara	Vendor Billed Directly	Jazzercise owns. KaizenCommerce validates checkout tax exemptions.
Shipping / Fulfillment	ShipStation	Vendor Billed Directly	Jazzercise owns. KaizenCommerce validates physical warehouse logic.
Franchise CRM	Salesforce CRM	Existing Account	Jazzercise owns. KaizenCommerce validates customer tag dependencies.
Email Marketing	HubSpot	Existing Account	Jazzercise owns. KaizenCommerce validates data sync continuity.

BLUEPRINT VALIDATION REQUIREMENT

Shopify Launchpad must be rigorously tested against overlapping merchandising events, complex automated discounts, collection-scale caching, regional customer access restrictions, and wholesale price calculations before the business treats it as the definitive product-drop operational framework.

SECTION 08

Migration, Data & SEO Continuity

SEO authority retention and accurate data migration are managed strictly as foundational launch-readiness workstreams, never as post-launch cleanup tasks. The baseline implementation metrics assume standard migration workflows across known, structured e-commerce data domains.

OPERATIONAL AREA	KAIZENCOMMERCE STRATEGIC APPROACH	LAUNCH-READY OUTPUT
Products & Collections	Audit all live product and collection metadata structures, compare historical schema indexing with Google's index, and explicitly map data fields into Shopify native structures.	A complete product and collection metadata migration verification checklist.
Content Page Structure	Review all top-tier operational pages for clean heading formatting, internal hyperlink integrity, image alt tag accuracy, and structural migration alignment.	Comprehensive Content QA and visual validation checklist before launch day.
URL Continuity / 301s	Crawl the legacy Magento production store and the Shopify staging environment, generating a mapping table of all URL changes to deploy 301 redirects prior to cutover.	Complete, validated redirect file loaded into Shopify, prioritizing high-authority indexed URLs.
Active 404 Monitoring	Configure Google Search Console tracking alerts and custom GA4 analytical dashboards to trap post-launch 404 errors or broken landing pages instantly.	First 30 days of live production monitored with rapid-response error remediation.
Technical SEO Checklist	Validate canonical link setups, structural sitemap submissions, robots.txt routing, structured schema code (Product/Breadcrumb/Article), and event tracking scripts.	Shopify technical SEO and web analytics validation matrix.
Custom Tracking Layers	Gather all third-party tracking pixels, attribution scripts, live chat embeds, and marketing tags during the initial week of the engagement.	Integrated tracking migration plan with complex script requirements flagged early.
Gift Cards & Orders	Validate raw system export quality, parse data format compliance, and cross-reference customer profile linkages prior to running imports into production.	Historical gift card balance and order history migration validation matrices.
Fulfillment Continuity	Establish clear order return states, define ShipStation synchronization timing, structure Will Call localized handling, and map refund transaction data parameters.	Fulfillment and return operational workflows fully signed off by warehouse managers.

DATA CAP AND OVERAGE PARAMETERS

The defined project scope is structured specifically around the discovered data profile: approximately 500 to 1,000 active SKUs, clean customer records, standardized order histories, approximately 1,000 unredeemed gift cards, and standard content pages. If data extractions introduce significantly larger volumes, multiple legacy databases, or complex custom data transformations, KaizenCommerce will issue a written change order to cover the increased workload.

SECTION 09

Implementation Approach & Validation

"Shopify is not launch-ready simply because configuration options are checked. Shopify is ready when real, highly specialized Jazzercise operational scenarios successfully pass validation tests."

KaizenCommerce executes work under a strict discovery-first methodology. The Unified Commerce Blueprint must precede full implementation commitments because Jazzercise needs its business rules validated before engineers spend costly hours on code, app logic, or connector assumptions.

Our core framework relies on **Parallel Validation**. The existing Magento system remains completely live and operational while the new Shopify Plus instance is configured, integrated, and populated. Cutover only occurs when historical data, distinct customer segments, conditional product visibility, pricing logic, live inventory syncs, tax calculations, warehouse fulfillment, and high-volume drop simulations pass testing against real enterprise requirements.

PHASE	WHAT HAPPENS	ACCOUNTABLE OWNER	OPERATIONAL RISK CONTROL
Discovery & Audit	Audit current legacy systems, lock target architecture layouts, define data fields, settle core app selection, and isolate open launch risks.	KaizenCommerce + Jazzercise	The Blueprint locks technical scope before engineering effort compounds.
Data Export & Mapping	Review product listings, master customer files, legacy gift cards, order logs, content structures, and transformation needs.	Option 1: Jazzercise executes / Option 2: KaizenCommerce	Data migration checklists and mathematical reconciliation rules are locked prior to running imports.
Build & Validation	Configure Shopify Plus settings, build core app layers, map customer segments, test Launchpad modules, verify checkouts, and build storefront templates. Simultaneously run live sync validation alongside Magento and Sage Intacct.	Divided by selected path option (KaizenCommerce + Jazzercise + Vendors)	Combined, multi-app end-to-end tests prevent isolated pass/fail metrics from hiding cross-system integration failures. No cutover is authorized until core data paths pass.

PHASE	WHAT HAPPENS	ACCOUNTABLE OWNER	OPERATIONAL RISK CONTROL
Controlled Cutover	Execute the comprehensive launch sequence checklist, update DNS parameters, point storefront routing, trigger monitors, and run live triage.	Divided by selected path option	Go-live only occurs once live integrations and physical operational flows pass executive review.

SECTION 10

Go-Live, Hypercare & Support FAQ

This section outlines post-launch parameters clearly so that engineering, operations, and financial support expectations are firmly set prior to contractual execution.

CORE QUESTION	DEFINITIVE OPERATIONAL ANSWER
What happens immediately after launch? What is excluded from standard warranty coverage? What must Jazzercise provide?	Under Option 2 (Full Implementation), KaizenCommerce provides dedicated post-launch hypercare and resolves any technical bugs or platform misconfigurations directly attributable to our build work, provided they are reported within 14 calendar days of go-live. Under Option 1 (Advisory), launch-week coverage remains purely advisory unless engineering execution tasks are separately scoped via a change order. Excluded from warranty: any configuration modifications made by Jazzercise staff after go-live, new feature requests, core scope additions, bugs introduced by third-party app updates outside our control, or platform defects reported after the 14-day window closes. Jazzercise must provide a single, named point of contact who retains full authority for user acceptance testing and operational sign-off during the final implementation week.
Will KaizenCommerce train the internal Jazzercise team?	Operational training is fully embedded in the Full Implementation path as a milestone of launch readiness. Under the Advisory path, KaizenCommerce reviews internal training documentation, standard operating runbooks, and launch checklists, while Jazzercise owns the actual training execution.
Can KaizenCommerce support our marketing platform integrations?	KaizenCommerce validates foundational e-commerce data continuity for HubSpot, GA4 scripts, tracking pixels, and product feeds during migration QA. Ongoing marketing campaign creation, audience generation, and asset management are excluded from this scope.
What support model is recommended for our business after launch?	For Jazzercise's specific high-drop business model, the strongest approach is continuing advisory support through the first full product-drop cycle post-launch to ensure the connected stack performs smoothly under real merchandising pressure.

Enterprise Risk Register

Every enterprise-scale platform migration carries operational risks. This register isolates the specific technical risks threatening this project and defines the structural controls used to keep delivery governed.

IDENTIFIED RISK AREA	LIKELIHOOD	IMPACT	KAIZENCOMMERCE MITIGATION CONTROL
Concurrent Shopify and Sage Intacct Launch	Medium	High	Lock all transaction integration data flows during the Blueprint phase, then process simulated orders sequentially through Shopify, Ven, Sage, Avalara, and ShipStation before running full launch rehearsals.
Salesforce Customer Tag Dependency	Medium	High	Construct a master customer segment tag matrix and validate US franchisee, Japan franchisee, employee, and DTC accounts during initial platform alpha testing.
Discount or visibility conflicts	Medium	High	Validate Wholesale Gorilla, Locksmith app logic, Launchpad parameters, and customer tags together in unified sweeps, completely banning isolated single-app tests.
Inventory Sync Timing Gaps	Medium	High	Establish Sage Intacct as the absolute, immutable physical inventory source of truth. Test product receive, sync, sell, refund, return, and stock adjustment states repeatedly.
Product Drop Readiness Failure	Low-Medium	High	Execute a live, realistic launch rehearsal simulating peak transaction volumes, staggered audience access rules, automated rollback criteria, and engineering monitoring dashboards.
September Go-Live Pressure	Medium	High	Use the architectural Blueprint outputs to categorize technical requirements into strict Phase 1 (Launch Critical) and Phase 2 (Post-Launch) groupings, eliminating unsafe last-minute additions.
Japan Instructor List Remains Manual	Medium	Medium	Maintain manual data updates as an accepted Phase 1 reality to protect timeline safety, but thoroughly document the automated API path to prevent hidden operational debt.

GO/NO-GO ADVISORY RULE

If unresolved bugs or mapping errors within Sage Intacct, Ven Technology, or customer segment calculations delay the master testing window by more than 14 calendar days, KaizenCommerce will issue a formal architectural assessment outlining whether the original target launch window remains viable or whether a rescheduled go-live represents the safer enterprise choice.

SECTION 12

Project Timeline & Milestones

The project timeline initiates immediately upon formal SOW contract execution, receipt of initial financial deposit (where applicable), and completion of development environment access handoffs.

Option 1: Blueprint + Advisory Timeline

PHASE	CORE STRATEGIC ACTIVITY	ACCOUNTABLE OWNER	DURATION	KEY MILESTONE DELIVERABLE
Week 1	Blueprint kickoff, system access reviews, legacy architecture technical audit.	KaizenCommerce + Jazzercise	1 Week	Initial discovery finalized; technical open question log locked.
Weeks 1-2	Blueprint construction, data parsing, architecture mapping.	KaizenCommerce	1-2 Weeks	Comprehensive, written Unified Commerce Blueprint delivered to leadership.
Advisory Phase	Weekly live strategy workshops and unlimited async technical advisory.	KaizenCommerce	Monthly Support	Architectural choices, QA test data findings, and launch risks managed weekly.
Pre-Launch	Comprehensive pre-launch readiness workshop and checklist audit.	KaizenCommerce + Jazzercise	1 Session	Go-live technical checklists, remaining blockers resolved, and system ownership mapped.

PHASE	CORE STRATEGIC ACTIVITY	ACCOUNTABLE OWNER	DURATION	KEY MILESTONE DELIVERABLE
Launch Window	Priority technical advisory support during the active cutover window.	KaizenCommerce	Launch Week	Real-time issue triage, error categorization, and decision assistance fully active.

Option 2: Full Implementation Timeline

PHASE	CORE IMPLEMENTATION ACTIVITY	ACCOUNTABLE OWNER	DURATION	KEY MILESTONE DELIVERABLE
Week 1	Discovery validation and final technical architecture lock.	KaizenCommerce + Jazzercise	1 Week	Blueprint scope explicitly finalized; master risk register confirmed.
Weeks 2-5	Shopify Plus environment build, code additions, and app integration configurations.	KaizenCommerce	4 Weeks	Production storefront templates, segment tag engines, and drop tools prepped for QA.
Weeks 4-8	Legacy data migration execution and rigorous integration QA testing sweeps.	KaizenCommerce + Vendors	4 Weeks	Product data, customer files, gift card balances, tax tables, and ERP records fully validated.
Weeks 8-10	Comprehensive live launch rehearsals and formal user acceptance testing.	KaizenCommerce + Jazzercise	2 Weeks	Drop rehearsals, order flow checks, stock sync testing, and warehouse operational training signed off.

PHASE	CORE IMPLEMENTATION ACTIVITY	ACCOUNTABLE OWNER	DURATION	KEY MILESTONE DELIVERABLE
Weeks 10-12	Controlled storefront cutover, live DNS updates, and hypercare support.	KaizenCommerce	2 Weeks	Production site successfully live; 14-calendar-day technical warranty active.

Note: Client-side delays in delivering environment system access, historical database exports, external vendor responses, or executive stakeholder approvals will automatically shift downstream milestones.

SECTION 13

Relevant Proof & Credentials

This technical mapping aligns KaizenCommerce capabilities directly with the unique architectural risks and platform intersections that Jazzercise faces in this migration.

PROOF AREA	WHY IT MATTERS CRUCIALLY FOR THIS PROJECT
Shopify Platform Depth	KaizenCommerce is owned and led explicitly by ex-Shopify corporate operators. Our CTO possesses deep, direct Shopify Logistics engineering experience, which proves vital when advanced checkout behaviors, real-time product availability, stock movements, complex fulfillment loops, and drop timelines intersect simultaneously.
Parallel Validation Method	We deploy our proprietary 100% Store Uptime / Parallel Validation methodology. Your existing Magento e-commerce engine stays fully active and revenue-generating while the new Shopify Plus stack is safely built, integrated, cross-checked, and approved by your team.
Operator-First Scope Control	The Blueprint phase is decoupled from full build ownership. This structures a protective commercial shield for Jazzercise, eliminating the risk of buying an expensive, oversized agency contract before the concrete data schemas, API limits, and vendor logic are mathematically confirmed.
Complex Operating Model Fit	Jazzercise does not require a simple template skin. Your model demands specialized mastery over high-volume product drops, tiered B2B/DTC customer segmentation, automated pricing matrix logic, Sage ERP timing constraints, and multichannel inventory syncs. KaizenCommerce is engineered for these exact multi-system technical intersections.

WHAT KAIZEN IS NOT SELLING

A generic, pre-packaged Shopify configuration checklist. The Blueprint constitutes a rigorous mathematical test of your operational data model across apps, APIs, data fields, and physical warehouse limits.

WHAT JAZZERCISE RECEIVES

A locked, signed-off operating model, a comprehensive customer segment QA matrix, a specialized product-drop execution runbook, a Sage Intacct connector validation plan, and a master launch-readiness checklist.

WHAT REDUCES ENTERPRISE RISK

Securing elite, senior platform architecture review early enough in the product lifecycle to catch flawed data sync assumptions before they solidify into expensive, delayed system rebuilds.

SECTION 14

Project Risks & Critical Assumptions

These architectural assumptions govern project execution by establishing the precise technical baseline conditions required to maintain the estimated service fees and delivery timelines.

CRITICAL RISK / ASSUMPTION	POTENTIAL TECHNICAL IMPACT	REQUIRED OPERATIONAL MITIGATION CONTROL
Magento as Active Base Platform	If remnants of the partial Salesforce Commerce deployment contain production-critical customer or order configurations, the data migration scope may expand.	Verify and officially confirm the exact transactional source-of-truth legacy data systems during Week 1 Blueprint workshops.
Ven Technology Capability	Unmapped connector gaps between Sage Intacct data endpoints and Shopify Plus objects could create manual administrative burdens or force custom middleware builds.	Run a technical capabilities mapping sweep against Ven Technology documentation and code samples before build decisions harden.
Salesforce CRM Tag Reliability	If customer tags are corrupted, automated segment pricing and visibility parameters will fail for US franchisees, Japan instructors, and employees.	Construct, map, and test a detailed cross-system customer tag validation matrix during early alpha testing.
Environment & Export Access	Delays in provisioning system credentials for Magento exports, Shopify Plus environments, Sage Intacct sandboxes, Ven documentation, Avalara, ShipStation, Salesforce, or HubSpot will delay milestones.	Explicitly identify and name system access owners, establishing hard delivery deadlines during the initial kickoff meeting.

CRITICAL RISK / ASSUMPTION	POTENTIAL TECHNICAL IMPACT	REQUIRED OPERATIONAL MITIGATION CONTROL
Data Export Cleanliness	Corrupted, unformatted, or incomplete legacy exports for product catalogs, order histories, and gift card records will require extensive manual transformation.	Isolate and validate representative data samples in Week 1 to identify database outliers and structuring anomalies early.
September Launch Window	Compressed or rushed executive decision cycles drastically increase data cutover and inventory synchronization failure rates.	Utilize Blueprint diagnostic outputs to define launch-critical features, systematically deferring non-critical elements to Phase 2.

COMMERCIAL PROTECTION CLAUSE

If the technical discovery during the Blueprint phase reveals significantly larger legacy data volumes, undocumented database systems, requirements for bespoke middleware development, or structural ERP API connector gaps outside the explicit boundaries defined in this document, KaizenCommerce will deliver a technical change order. Project milestones, timelines, and service fees may be modified via an official signed change order before engineering work proceeds.

SECTION 15

Commercial Investment & Payment Milestones

The Kaizen Unified Commerce Blueprint represents the formal entry point for all engagements. The Blueprint fee is credited in full (100%) toward the execution contract if Jazzercise elects to convert into the Full Implementation path.

Option 1: Blueprint + Technical Implementation Advisory

LINE ITEM DESCRIPTION	INVESTMENT AMOUNT (USD)
Kaizen Unified Commerce Blueprint (One-time Diagnostic Fee)	\$1,000
Ongoing Senior Implementation Advisory Services (Billed Monthly)	\$2,500 / Month
Expected Strategic Advisory Window Through September Launch (Estimated 3 Months)	\$7,500
Total Estimated Advisory Engagement Investment Through Launch	\$8,500

Note: The advisory engagement transitions to a flexible month-to-month model following the first month. Once the internal Jazzercise engineering team achieves autonomous operational capacity, the advisory contract can be terminated at the next upcoming monthly billing boundary.

Option 2: Full Implementation Execution (Kaizen-Owned Agency Build)

LINE ITEM DESCRIPTION	INVESTMENT AMOUNT (USD)
Gross Agency Implementation Fee (End-to-End Build Ownership)	\$45,000
Blueprint Diagnostic Credit Deduction	-\$1,000
Net Implementation Engineering Investment	\$44,000

Master Program Payment Schedule

SELECTED PATH OPTION	BILLING WINDOW / TIMING	PROJECT MILESTONE / TRIGGER CONDITION	AMOUNT (USD)
Blueprint + Advisory	At Blueprint Kickoff	Initial engagement begins; discovery environment opened.	\$1,000
Blueprint + Advisory	Monthly Recurring	Delivery of weekly architecture workshops and unlimited async Teams support.	\$2,500 / mo
Full Implementation	At Contract Signing	50% initial program deposit to secure dedicated project resources and lock timelines.	\$22,000
Full Implementation	Mid-Project Milestone	Core legacy data migration and cross-system integration QA environment officially approved.	\$11,000
Full Implementation	Go-Live Approval	Shopify Plus storefront successfully deployed live, master checklist signed off, and hypercare starts.	\$11,000
Full Implementation	Total Program Cost	Net programmatic investment across all delivery phases.	\$44,000

Financial Parameters: All currencies are denominated strictly in United States Dollars (USD). Authorized payment channels are restricted to secure corporate wire transfers or verified ACH deposits. Standard commercial terms are Net-15 from the explicit invoice creation date following milestone achievements. Third-party SaaS fees, app licensing, connector costs, theme acquisitions, and separate vendor billings are handled directly by Jazzercise.

Why KaizenCommerce & Immediate Next Steps

KaizenCommerce designs architecture specifically for complex Shopify migrations where structural operational risk mitigation takes equal priority over visual storefront aesthetics. This migration project does not require a simple template layout; it requires deep platform fluency, enterprise customer segmentation mapping, exact ERP synchronization timing, inventory authority locking, data continuity structures, tax configurations, automated fulfillment routings, and drop management. Our proposal is engineered specifically around managing those operational dependencies.

Our CTO's background within Shopify Logistics provides an invaluable advantage. This ensures your technical architecture safely coordinates product availability counts, localized user permissions, automated checkout extension rules, and multi-system data flows under a rigid launch schedule. Our 100% Store Uptime / Parallel Validation Guarantee completely removes migration business risk by keeping your legacy platform active until every system test passes inspection.

Program Activation Next Steps

SEQUENCE	REQUIRED IMMEDIATE ACTION ITEM
Step 1	Confirm Option 1 as the approved project path so KaizenCommerce can officially schedule the engineering Blueprint kickoff session.
Step 2	Provide technical access owners and administrative contacts for Magento legacy data exports, Shopify Plus, Sage Intacct sandboxes, Ven Technology portals, Avalara instances, ShipStation logins, Salesforce CRM environments, and HubSpot platforms.
Step 3	Complete the comprehensive Unified Commerce Blueprint phase during Week 1 to finalize enterprise architecture layouts, mitigate launch risks, and establish the Advisory work plan.
Step 4	Evaluate the diagnostic outputs immediately following the Blueprint delivery to formally decide whether to proceed via the Advisory support track or convert into the Full Implementation path.

SEND-READY POSITIONING STATEMENT

Executive Message to Jazzercise Leadership: KaizenCommerce is not seeking to replace or disrupt your internal engineering team's work. We are proposing a senior, elite technical review layer first to guarantee system security, converting to full delivery ownership only if the empirical findings of the Blueprint phase prove that path to be the safer option for the business.
